Goal	1. To understand the Kakao message view uv, click uv and CTR 2. To unerstand how many installs we can have via this program
Dataset	abtest_instance_id IN (215111,215112,215113) Between 20240911 and 20240924
Metrics	1.message_view_uv: the number of users who viewed the message(= counos sent success uv) 2.message_click_uv: the number of users who clicked the message 3. message_CTR = message_click_uv/message_view_uv 4. install: the number of uuids that firstly installed the Eats App attributed to desgnted campaigns 5. reinstall: the number of uuids that installed the Eats App attributed to desgnted campaigns,but not the first time
Key Findings	1. The Kakao order message CTR is 3.2%/3.4%/0.6% in the scenarios Order Cancelled/Order Accepted/Order Delivered. This is relatively lower than the order push CTR(aournd 10% in general) Order push/message, as an informative notice, when the order delivery status is on track or witin expectation, the CTR is usually low 2. There were 7,483 installs(77% Android 23% iOS) attributed to this experiments, 277/6,398/808 from scenario Order Cancelled/Accepted/Delivered, taking 1.3%/2.0%/.3% of cohort 3. There were 8.2%/11.2%/0.4% install uplift from scenario Order Cancelled/Accepted/Delivered(linear logic, no attribution applied)
